- Very compact and sealed housing according to IP54 standards.
- The housing is a cube of only 25cm and is with only 13kg; absolutely lightweight
- Equipped with Coherent OPSL Taipan high-end modules for a great beam precision and a fantastic brilliance.
- Extremely fast CT-6210HP SE scanners with a scan speed of up to 90kpps at 4°
- Great beam specs: 2.8mm / <1.0mrad
- The basic settings of the device can be set through a versatile detachable remote control pad.
- Easy handling
- Completely manufactured in Germany, and stands for a very high quality level
- All systems of the series can be controlled as standard through a professional interface and optional through DMX, automatic mode, LAN, SD-card or even through W-DMX.

APPLICATIONS:

Big indoor or outdoor events, such as concerts, landmarks, sky laser, clubs, discotheques, amusement parks, etc.

To Laserworld, the Asia market is quite interesting and attractive, because there are big projects in Asia which have solely used our products. Our office in Shenzhen provides convenient services to our customers, especially those who are in China. We have presented the RTI PIKO series in Getshow; these are completely made in Germany and Switzerland, and the quality checks have been completed in Switzerland. The compact RTI Piko laser system, though small, promises amazing graphics for any entertainment or archtainment event.
